

102 Series Edge and Gravity Drop Planter

2 Row-Gravity Drop with Fertilizer

Gravity Drop:

The answer for an entirely different planting method. Designed for planting okra, corn, peas, beans, watermelon, cucumber, squash, pumpkin, peanuts and other fragile seeds.

Edge Drop:

Ideal for corn, soybeans, milo, and many other seeds. Plates are available for all types of seed.

Features a side dress fertilizer:

For best results, leading agricultural colleges and agronomists are now recommending that fertilizer be applied to the **side** and **below** the seed, rather than being applied near the seed or with the seed. The **Burch Side Dress Fertilizer** attachment was designed to put a band of fertilizer on one or both sides of the seed and is adjustable for depth and width. 102 Series Planters are available with or without the fertilizer attachment.

Burch Planters:

Each unit is designed to operate independently and is the most versatile planter available. Burch planters have the ability to handle seed gently and precisely without breaking or crushing. Each planter can be acquired in single or multiple rows with either runner or double-disc openers, the disc openers recommended for unprepared ground. Adapt the planter to your soil conditions and planting requirements with our wide range of available attachments and planting aids.

For over 70 years Burch Planters have been sold throughout the world and have consistently proven their high marks of reliability, accuracy, and ease of maintenance. The 102 Series is no exception, providing the quality, strength, and versatility you can expect from the Burch line.
