**PULL TYPE HAY RAKES  
WITH THREE GROUND WHEELS  
9R-3GW**

**Nine-Fingerwheel Rake with three ground wheels  
9R-3GW**

is pull type rotary tedder, spreader and windrower on the three ground wheels designed/intended for the use on the big working surfaces. Its working width of 6,40 m maximum permits accuracy and speed while maintaining the superior handling abilities typical for the "GRAMIP-TPS" Fingerwheel Rakes. Thanks to the adaptable design/shape of the tines/fingers, jointly adaptable supports of the ground wheels and amortizing springs the machine performs/rakes rapidly and effectively on the rough and stony terrains. The third ground wheel enables obtaining of a bigger maximum working width and at the same time realizing of a smaller minimal transport width, what makes easy manipulation with the machine during its transport and store. The Fingerwheel Rakes are ground driven and therefore it is not necessary driving via P.T.O.-power shaft, gears, pulleys, or belts, what makes them simple for maintenance and service. The only real maintenance required is greasing the transport wheel assemblies just before the season begins and periodically check bolts and nuts and tighten if necessary.

The specially designed draw bar with a spring loaded pin, permits the operator to change the different working/transport settings from the tractor seat by simply pulling the handle of the rope.

MODEL	DIAMETER		NUMBER	WORKING WIDTH						TRANSPORT		SPEED		TIRES
	in	cm		ft	cm	kW	HP	lb	kg	ft	cm	miles/h	km/h	
9R - 3GW	55"	141	9	21'	640	22.8	31	1235	560	7' 7"	230	13	21	6.00-16
